Double Stranded DNA (dsDNA) (Nuclear Marker); Clone AE-2 (Concentrate)

Availability/Contents:	<u>ltem #</u> BA0418-C.5	<u>Volume</u> 0.5 ml	
Description:			
Species: Immunogen: Clone: Isotype: Entrez Gene ID: Hu Chromosome Loc.:	Mouse Nuclei of Raji Burkitt's cel AE-2 IgG3, kappa Not Known Not Known	ls	
Synonyms: Mol. Weight of Antigen: Format:	Not Known Not Known 200µg/ml of Ab purified fr with 0.05% BSA & 0.05%		by Protein A/G. Prepared in 10mM PBS
Specificity:	This antibody recognizes the double stranded DNA in human cells. It can be used to stain the nuclei in cell or tissue preparations and can be used as a nuclear marker in human cells.		
Background:	This monoclonal antibody is part of a new panel of reagents which recognizes subcellular organelles or compartments of human cells. These markers may be useful in identification of these organelles in cells, tissues, and biochemical preparations. This antibody produces a homogeneous staining pattern in the nucleus of normal and malignant cells.		
Species Reactivity: Positive Control: Cellular Localization: Titer/ Working Dilution:	• (rozen and Formalin-fixed):	0.5-1 μg/ml
Microbiological State:	Immunocytochemistry (Ad Flow Cytometry: Immunofluorescence: This product is not sterile.	0.5-1 μg/million cells 1-2 μg/ml	0.5-1 μg/ml

Instructions For Use RA0418-C.5-IFU-RU0

Rev. Date: Jan. 13, 2015

Revision: 1 Page 2 of 2

P.O. Box 3286 - Logan, Utah 84323, U.S.A. - Tel. (800) 729-8350 - Tel. (435) 755-9848 - Fax (435) 755-0015 - www.scytek.com

Uses/Limitations:

Not to be taken internally. For Research Use Only. This product is intended for qualitative immunohistochemistry with normal and neoplastic formalin-fixed, paraffin-embedded tissue sections, to be viewed by light microscopy. Do not use if reagent becomes cloudy. Do not use past expiration date. Non-Sterile.

Ordering Information and Current Pricing at www.scytek.com

Procedure:

- 1. **Tissue Section Pretreatment (Required):** Staining of formalin fixed, paraffin embedded tissue sections is significantly enhanced by incubating sections in 4<u>N</u> HCl for 30 minutes at room temperature.
- Primary Antibody Incubation Time: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user.
- 3. **Visualization:** For maximum staining intensity we recommend the "UltraTek HRP Anti-Polyvalent Lab Pack" (ScyTek catalog# UHP125, see IFU for instructions) combined with the "DAB Chromogen/Substrate Bulk Pack (High Contrast)" (ScyTek catalog# ACV500, see IFU for instructions).

 Precautions:
 Contains Sodium Azide as a preservative (0.09% w/v).

 Do not pipette by mouth.
 Avoid contact of reagents and specimens with skin and mucous membranes.

 Avoid microbial contamination of reagents or increased nonspecific staining may occur.
 This product contains no hazardous material at a reportable concentration according to U.S. 29 CFR 1910.1200, OSHA Hazardous Communication Standard and EC Directive 91/155/EC.

- Warranty: No products or "Instructions For Use (IFU)" are to be construed as a recommendation for use in violation of any patents. We make no representations, warranties or assurances as to the accuracy or completeness of information provided on our IFU or website. Our warranty is limited to the actual price paid for the product. ScyTek Laboratories, Inc. is not liable for any property damage, personal injury, time or effort or economic loss caused by our products. Immunohistochemistry is a complex technique involving both histological and immunological detection methods. Tissue processing and handling prior to immunostaining can cause inconsistent results. Variations in fixation and embedding or the inherent nature of the tissue specimen may cause variations in results. Endogenous peroxidase activity or pseudoperoxidase activity in erythrocytes and endogenous biotin may cause non-specific staining depending on detection system used.
