

Polyclonal Antibody to Human Factor VIII Related Antigen

Description:

- Immunogen:** Factor VIII related antigen isolated from human plasma.
- Format:** This antibody has been pretitered and quality controlled to work on formalin-fixed paraffin-embedded as well as acetone fixed cryostat tissue sections. No further titration is required.
- Specificity:** This antibody reacts with factor VIII related antigen. It stains endothelial cells and megakaryocytes in various human tissues. This antibody does not cross-react with any other cell types.

Uses/Limitations: Immunohistochemistry
For Research Use Only.
Do not use past expiration date.

Storage: 2-8° Centigrade.

Procedure: We suggest an incubation period of 30-60 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Although not required, proteolytic treatment may enhance the immunostaining in overfixed tissues.

Precautions: Contains Sodium Azide as a preservative.
Do not pipette by mouth.
