# DAB Substrate (High Contrast)

## **Description:**

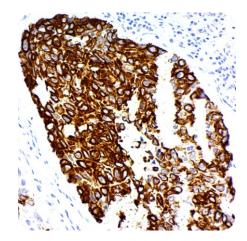

DAB Substrate (High Contrast) is a solution specifically designed for optimal signal intensity and contrast. When in the presence of peroxidase enzyme and DAB Chromogen, the substrate helps create a brown precipitate that is insoluble in alcohol. The standard working dilution is 50ul (0.9mg) of DAB Chromogen per 1ml of DAB Substrate (High Contrast), although the ratio can be adjusted as desired, the use of liquid components reduces some risks associated with handling powders (ie. dust inhalation), and eliminates waste which often results from using tablets that require a predetermined final volume. Once the two components are combined, the reagent can be used for up to six hours, making it ideal for automated stainers.

**Uses/Limitations:** Not to be taken internally. For In-Vitro Diagnostic Use only. Hematologic applications. Do not use if reagents become cloudy. Do not use past expiration date. Use caution when handling reagents. Non-Sterile.

**Control Tissue:** Any well-fixed frozen or FFPE tissue.

Availability: Item # ACU250 ACU500 ACU999

Volume 250ml 500ml 1000ml

Lung Squamous Cell Carcinoma Stained with ScyTek's Cytokeratin 5; Clone EP42 (Cat#A00139) and an IHC protocol containing ScyTek's DAB Substrate (ACU)

Storage: Store at 2-8°C. Stable for 18 months from the date of manufacture.

## Ordering Information and Current Pricing at www.scytek.com

**Precautions:** DAB Chromogen: Contains Diaminobenzidine in buffer. DAB is a suspected carcinogen. Avoid contact with skin and eyes. Reagent is acidic and can cause burns if skin contact occurs. Handle with care and dispose of according to regulations.

DAB Substrate: Contains Hydrogen Peroxide in buffer. Avoid contact with skin and eyes.

# **Required but not Provided:**

DAB Chromogen (ScyTek Cat#: ACB)

### Procedure:

- 1. After incubation and rinse of HRP, Combine 50µl of DAB Chromogen with 1mL of DAB Substrate (High Contrast).
- 2. Apply mixture to tissue section.
- 3. Incubate tissue section for 5-15 minutes or until desired reaction intensity.
- 4. Rinse tissue in buffer, counterstain, dehydrate, and clear in xylene or xylene substitute and coverslip.
